Summary

Java Backend Developer and MCA candidate (2026) with hands-on experience building backend systems using Java, Spring Boot, REST APIs, Spring Security, microservices, Apache Kafka, Redis, PostgreSQL, MongoDB, and Docker. Experienced in designing event-driven services, real-time WebSocket applications, secure REST APIs, and independently deployable microservices. Seeking a Java Backend Developer or Software Engineer role focused on scalable and maintainable backend systems.

Technical Skills

Languages: Java, Python, JavaScript, SQL

Backend: Spring Boot, Spring Security, Node.js, Express.js, REST APIs, Microservices, WebSocket

Databases: PostgreSQL, MongoDB, MySQL, Redis

Distributed Systems: Apache Kafka, Event-Driven Architecture, Asynchronous Communication

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Maven, Postman, Swagger, OpenAPI, Linux

Core Concepts: Object-Oriented Programming, Multithreading, Database Design, API Design, JWT Authentication, Role-Based Access Control

Projects

E-Commerce Microservices Platform *Java, Spring Boot, Spring Security, React.js, PostgreSQL, Apache Kafka, Redis, Docker*

- Designed and developed an e-commerce backend with four independently deployable microservices for Product, Order, Payment, and Inventory, enabling service isolation and independent scaling.
- Built secure REST APIs using Spring Boot with JWT-based authentication and role-based access control (RBAC) for protected application resources.
- Implemented Redis caching for frequently accessed data and designed asynchronous order and inventory workflows using Apache Kafka for event-driven inter-service communication.
- Containerized the microservices using Docker and documented REST API contracts using Swagger/OpenAPI, with API validation performed through Postman.

Real-Time Collaborative Document Editor *Java, Spring Boot, WebSocket, STOMP, MongoDB, React*

- Developed a real-time collaborative document editing platform using Spring Boot and WebSocket with STOMP, enabling multiple users to edit documents simultaneously with live updates.
- Implemented WebSocket-based publish/subscribe broadcasting to synchronize document updates across connected clients without polling or manual page refreshes.
- Designed RESTful APIs for document CRUD operations, metadata management, and version history, with document data persisted in MongoDB.
- Developed a React frontend integrated with the Spring Boot backend through REST and WebSocket clients, following a modular MVC-based application structure.

StudySync – Scalable Microservices Study Platform *Python, FastAPI, Pydantic, Node.js, Apache Kafka, Redis, Docker, PostgreSQL*

- Designed and developed a distributed backend platform consisting of five independent microservices using Docker and Docker Compose, providing service isolation and independent deployment.
- Built asynchronous RESTful APIs using Python and FastAPI with Pydantic-based request validation and service-level fault isolation.
- Implemented event-driven communication between services using Apache Kafka for asynchronous message processing and integrated Redis caching to reduce repeated database access.
- Automated local environment provisioning using Docker Compose with service health checks and startup dependency management for consistent development environments.

Education

Master of Computer Applications (MCA) 2024 – 2026
Savitribai Phule Pune University, Pune, India

Bachelor of Vocation (B.Voc) in Software Development 2020 – 2023
PIRENS IBMA, Loni **CGPA: 9.09/10**
